MUDASIR ZIA

Software Developer & Cybersecurity Professional — Frontend | Python | Security Automation | SOC

Mansehra, KPK, Pakistan | +92-323-2152656 | ziamudasir744@gmail.com | github.com/CyberBros435 | linkedin.com/in/mudasir-zia-a535243b5

Multi-skilled technologist spanning frontend development, Python engineering, and cybersecurity, with real delivered work in each area rather than single-domain theory. Shipped 5+ Python tools during a paid software house internship, built and taught frontend curriculum to student cohorts, and moved into security by building offensive tooling (custom brute-forcers, port scanners) and defensive detection (a 13-project Splunk SIEM home lab, one validated to a 58-second true-positive detection window). Four completed cybersecurity internships and ongoing penetration-testing capstone work add applied security experience beyond self-study. Currently pursuing a BS in Computer Science at Virtual University of Pakistan.

Frontend Development

Skill level: Intermediate — built and shipped client-facing UI during a paid internship; taught the fundamentals to students.

Stack: HTML5, CSS3, JavaScript (ES6+), Bootstrap 5, Tailwind CSS, jQuery, responsive/SEO-optimized design

- Built responsive, SEO-optimized landing pages and an e-commerce storefront UI (RedStore) with scroll animations (AOS)
- Built a browser-based CV/resume builder and a personal developer portfolio site, both fully responsive
- Taught 1 full Frontend Web Development cohort at Star Academy, Mansehra (fundamentals to responsive project completion)

Python Development

Skill level: Intermediate/Advanced (OOP) — 6 months paid professional experience plus 2 cohorts taught.

Stack: Python (OOP), Django, Flask, MySQL/SQLite, REST APIs, Git/GitHub

- **Python Developer — FiveD Software House** (Oct 2025 – Apr 2026, paid): delivered 5+ production tools (automation scripts, backend utilities) integrated with SQLite/MySQL; debugged live codebases in a team setting
- Built a PDF merger/splitter desktop suite (pypdf, Tkinter), an anonymous Instagram viewer (requests, BeautifulSoup), and a banking system simulation (pure OOP)
- Taught 2 full Python cohorts at Star Academy, Mansehra, from fundamentals through OOP and project work

Python for Security Automation

Skill level: Practical/applied — writes offensive and defensive tooling from scratch rather than relying only on prebuilt scanners.

- Built a custom Python TCP port scanner used against a live target, confirming 2 genuine open ports (445/135)
- Built a custom brute-force script and a 15-IP distributed password-spray simulation against a self-hosted Flask login target
- Built a 3-tool hash security suite — generator, dictionary-based cracker, and a 2-layer identifier (regex + Shannon entropy) covering 12+ hash formats
- Built a Python/Scapy network packet sniffer and performed a static code security audit (Flask/Bandit) during the CodeAlpha internship

Cybersecurity / SOC

Skill level: Entry-level, hands-on — 4 completed internships plus a self-built, validated SIEM home lab.

- **SOC Correlation & Incident Grouping** (Splunk SPL): validated a true-positive attack chain with a 58-second detection window; automated 4-event incident grouping — strongest lab project
- **Ransomware detection** (MITRE T1486) and **SQL injection detection** (10 real payloads against a vulnerable endpoint, T1190) — both fully documented with incident reports
- 13-project Splunk SIEM home lab total: brute-force/password-spray detection, data exfiltration detection, threat-intel lookup enrichment, scheduled alerting dashboards, Wireshark/OSINT network analysis
- Ongoing penetration-testing capstone (Bano Qabil training): confirmed 3 remote-root exploits on Metasploitable2 (Metasploit), SQLi/CSRF/command injection on DVWA, an IDOR and a JWT plaintext-password leak on Juice Shop, an S3 public-bucket misconfiguration (LocalStack), and malware detection validation (ClamAV/EICAR) — in progress
- Completed OWASP Top 10 scenario-based labs (PortSwigger Web Academy): XSS, SQLi, IDOR, CSRF, auth bypass

Work Experience

SOC Analyst Internship — TechBiz Security Academy — 2026 | Credential ID CERT-2026-00228

- Configured Splunk, built an EventCode 4625 failed-logon dashboard panel, analyzed network traffic in Wireshark

Cybersecurity Virtual Internships — CodeAlpha, DecodeLabs & SQROCK IT Solutions — Jul – Sep 2026

- Delivered a packet sniffer, phishing-awareness training, a password tool, a vulnerability audit, an encryption tool, and a code security audit; LORs from 2 of 3

Python Developer — Intern (Paid) | FiveD Software House — Oct 2025 – Apr 2026

- 5+ production Python tools integrated with SQLite/MySQL

Technical Instructor | Star Academy, Mansehra — 2024 – 2025

- 3 cohorts taught (2× Python, 1× Frontend Web Dev)

Certifications

ISC2 CC — all 5 domain trainings complete (exam pending), May 2026 | Google Cybersecurity Professional Certificate, 2026 | Fortinet NSE 1, Jun 2026 | Johns Hopkins University — Intro to Intrusion Detection Systems, 2026 | Full list on LinkedIn

Education

BS Computer Science — Virtual University of Pakistan — In Progress — starts Oct 2026
Intermediate (ICS) — Computer Science — BISE Abbottabad — Completed 2026 — 919/1200
Matriculation (Biology) — BISE Abbottabad — 1000/1200
