MUDASIR ZIA

Entry-Level SOC Analyst (Tier 1)

Mansehra, KPK, Pakistan | +92-323-2152656 | ziamudasir744@gmail.com | github.com/CyberBros435 | linkedin.com/in/mudasir-zia-a535243b5

Entry-level SOC Analyst candidate with hands-on SIEM experience across **four completed cybersecurity internships** and a self-built Splunk home lab of 13 detection projects, correlating evidence to MITRE ATT&CK and documenting every finding in a formal incident report. Built and validated a true-positive detection chain with a 58-second detection window, configured a live Windows Event Log (EventCode 4625) monitoring dashboard, and investigated web, network, and endpoint attack scenarios end to end. Completed all five ISC2 Certified in Cybersecurity domain trainings plus Google Cybersecurity Professional Certificate coursework. Backed by a 6-month paid Python development internship, giving this profile a rare edge: the ability to script and automate detection logic, not just operate prebuilt tools.

Core SOC Competencies

SIEM Alert Monitoring & Triage (Splunk/SPL) • Correlation Searches (stats, streamstats, transaction) • Brute-Force & Password-Spray Detection (T1110) • SQL Injection Detection (T1190) • Data Exfiltration Detection (T1041) • Port-Scan/Recon Detection (T1595) • Threat-Intel Lookup Enrichment • Scheduled Alerting & Dashboards • True/False Positive Validation • Incident Documentation (MITRE mapping, IOCs, timeline) • Windows Security Event Log Analysis (4624/4625) • Network Fundamentals (Wireshark/Nmap) • OWASP Top 10 • Python Scripting & Automation

Work Experience

SOC Analyst Internship — TechBiz Security Academy 2026 | Credential ID CERT-2026-00228 (verifiable)

- Completed hands-on SOC training: networking fundamentals, Linux log analysis, and phishing email analysis (TryHackMe)
- Installed and configured Splunk locally; built a SIEM dashboard panel tracking Windows EventCode 4625 (failed logon) in real time
- Performed network traffic analysis in Wireshark on a captured PCAP, documenting protocol-level findings in a formal report
- Certificate of Internship Completion issued with distinction

Cybersecurity Virtual Internships — CodeAlpha, DecodeLabs & SQROCK IT Solutions Jul – Sep 2026

- Delivered project-based security work across 3 programs: Python/Scapy network packet sniffer, phishing-awareness training, password strength checker with breach-check, vulnerability audit, symmetric encryption tool, and a static code security audit (Flask/Bandit)
- Earned Certificates of Completion from all three; Letters of Recommendation from CodeAlpha and SQROCK IT Solutions

Python Developer — Intern (Paid) | FiveD Software House, Mansehra, KPK Oct 2025 – Apr 2026

- Delivered 5+ production Python tools (automation scripts, backend utilities) integrated with SQLite/MySQL; debugged and reviewed live codebases in a team setting

Technical Instructor | Star Academy, Mansehra 2024 – 2025

- Taught Python (incl. OOP) and frontend web development fundamentals to 3 student cohorts, from zero background to independent project completion

SOC / SIEM Home-Lab Projects — 13 Projects (github.com/CyberBros435)

SOC Correlation & Incident Grouping — ***Splunk SPL (streamstats, transaction)***

- Validated a true-positive attack chain with a 58-second detection window; grouped a 4-event/362-second incident automatically — the strongest, most rigorously validated project in the portfolio

Brute-Force & Password-Spray Detection Suite — ***Python, Flask, Splunk SPL | T1110***

- Built a Flask login target, attacked it with a custom brute-forcer and 15-IP password-spray simulation, and detected both via EventCode 4625/4624 frequency analytics

SQL Injection Detection Lab — ***Python, Flask, SQLite, Splunk SPL | T1190***

- Ran 10 real SQL injection payloads against a vulnerable login endpoint and detected the attack pattern with SPL, fully documented

Ransomware Simulation with Live Alerting — ***Splunk, Custom JSON Logs | T1486***

- Simulated ransomware encryption behavior and configured a live Splunk alert firing on encryption-pattern activity

Port Scan Detection & Real Recon Analysis — ***Python, Splunk SPL | T1595***

- Wrote a real Python TCP scanner, discovered 2 genuine open ports (445/135) on a live target, and validated detection coverage in Splunk

Network Packet Analysis & OSINT — ***Wireshark, OSINT tools***

- Captured and analyzed a real TCP 3-way handshake, then cross-referenced findings across 6 OSINT platforms (WHOIS, VirusTotal, Cisco Talos, Shodan)

Technical Skills

SOC/Blue Team: Splunk (SPL, correlation, alerting, dashboards), Windows Event Log analysis, incident documentation, alert triage/escalation
Security Frameworks: MITRE ATT&CK, OWASP Top 10 (XSS, SQLi, CSRF, IDOR, Broken Auth)
Networking & Tools: Wireshark, Nmap, Burp Suite, TCP/IP, port/service enumeration
Operating Systems: Windows (Event Viewer, Security log admin), Kali Linux, Linux CLI
Development: Python (OOP, automation, Flask, Django), JavaScript, HTML5/CSS3, MySQL/SQLite, Git/GitHub

Certifications

ISC2 Certified in Cybersecurity (CC) — all 5 domain trainings complete (Security Principles, Incident Response/BC/DR, Access Control, Network Security, Security Operations), May 2026 — Pearson VUE exam pending | Google Cybersecurity Professional Certificate — Foundations; Connect & Protect: Networks, 2026 | Fortinet NSE 1 — Getting Started in Cybersecurity; Threat Landscape, 2026 | Johns Hopkins University — Intro to Intrusion Detection Systems, 2026

Full certification list (incl. Cisco, IBM, SoloLearn) available on LinkedIn.

Education

BS Computer Science — Virtual University of Pakistan, Faculty of Computer Science and IT — In Progress — 1st Semester starts Oct 2026
Intermediate (ICS) — Computer Science — BISE Abbottabad, KPK, Pakistan — Completed 2026 — 919/1200
Matriculation (Biology) — BISE Abbottabad, KPK, Pakistan — 1000/1200 (83.3%)
